

WAVES'N SEE

WaveCams® is able to measure wave parameters in near real time, in addition to beach morphology.

By filming the breaking of the waves, WaveCams® detects the height and period and, thanks to an orthoprojection process, their direction.

WAVES CHARACTERISTICS

Deliverables

- Sea state (wave height, wave period and direction)
- Breaking point
- Energy dissipation

Your needs

- Support to modelization with local data
- Protection structures sizing
- Characterize the impact of storm events on protection structures
- Prevent and raise awareness on wave overtopping risks
